CoLiTec software installation package

To install the CoLiTec software use the installation package ***CoLiTec_install.exe***. It contains the necessary libraries and executable files for the stable operation of the CoLiTec software.

Step by step description of the installation process:

1.   Run the installation package ***CoLiTec_install.exe***;

2.   Wait until the **CoLiTec unpacker** package prepares the necessary installation files and completes its work;

3.   **CoLiTec installation manager** starts automatically. Follow the prompts:

a.   Specify the path to install the **CoLiTec software** (if you already have an installed version of the **CoLiTec software**, **CoLiTec installation manager** will prompt you to update **CoLiTec** current version. User settings will be saved);

b.   Ensure that the system requirements correspond to minimum requirements to install the CoLiTec software (red indicator line reports of non-compliance).

*More information about the system requirements can be found in document **«CoLiTec - OS and PC requirements»***;

c.   Specify the path to folder with frames for **CoLiTec software** testing (if you do not want to test **CoLiTec software** and use a set of test frames, leave this field empty);

d.   Using optional switches select "create shortcuts" for **CoLiTec software** on the desktop and / or in the "Start" menu.

e.   Upon completion of software installation, close **CoLiTec installation manager**.

f.   Wait until the **CoLiTec unpacker** package completes its work and it will be automatically closed.

4.   Perform the initial configuration for ***Threshold.exe*** settings editor

*More information about the system requirements can be found in document **«ThresHolds - Brief settings creating»***;

5.   Perform the initial configuration for ***LookSky.exe*** viewer

*More information about the system requirements can be found in document **«LookSky - Brief manual for start and complex zone processing»***;

6.   **CoLiTec software** is ready to use.
